

Running a Swiss Lathe? You need a Purge!

PURGE - CONSTANT FLOW MEDIA FILTRATION

Best for your Swiss Machines that produce chips and fines.
For environments with moderate volume. Great for metalworking,
ceramics and composites.

Best for High Accuracy Machining

- Purge offers filtration down to 5µm
- Pickup flow placed directly at outpoint of filtering conveyor which catches small chips that are fine enough to escape the conveyor

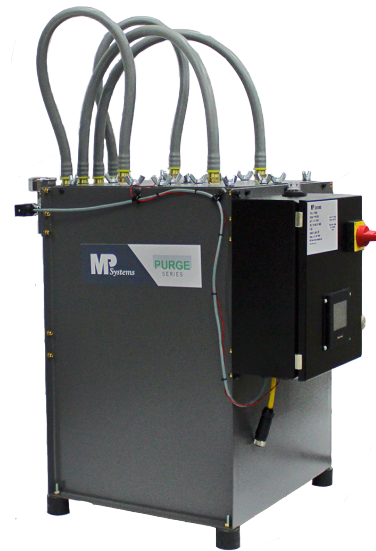

For Productive Machines

- Flow rate of 30-60 GPM
- Filter bags catch all debris before returning to coolant tank, which extends time between tank clean-outs
- Compatible with machines that run water-based coolant or oil-based

Save Time and Labor

Every minute an operator spends with a shovel in their hand is a minute they aren't checking tools or loading parts.

- Purge has 4 filter bags that each hold 5 gallons of chips giving it up to 20 gallon capacity
- Bags are taken out and thrown away so there is little labor required

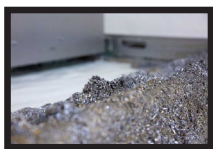

Versatile

Accepts a variety of filtration media types. Contact MP Systems for more information.
